# Project Management

## Providing full project management

Arc Energy Resources provides a fully integrated project management service. Experienced staff are pleased to offer everything from design right through to delivery and documentation.

The project management team supplies technical support through highly qualified and knowledgeable engineers.

By combining core activities of weld overlay cladding and fabrication, Arc Energy deliver a complete package that presents savings in both production time and costs.

From initial enquiry right through to the end of the project, Arc Energy's engineering service incorporates everything from procurement, welding, machining, inspection and NDT, through to delivery and documentation.

### Knowledge and Experience

Arc Energy has a clear understanding and a comprehensive knowledge of many market sectors, allowing full appreciation of specific demands and job requirements.

This has come through many years of working in partnership with clients, and gaining detailed knowledge of industry requirements.

### Service

Dedicated account personnel provide a smooth transition from initial enquiry through to delivery and beyond.

A dialogue is established early in order to eradicate any potential issues or problems the project is likely to encounter.

### Engineering Expertise

Arc Energy has vast knowledge and engineering expertise. Managing Director and European Welding Engineer, Alan Robinson, has over 30 years of industry experience. He has established a strong team capable of delivering the perfect product.

### Contacts

Close relationships with clients and suppliers have been established, amongst which are some of the largest companies in the world.

### Investors in People

Arc Energy's commitment to development through people is highlighted by the Investors In People award, first achieved in 2004. By investing in people, Arc Energy is investing in the future of the company.
